

AUDIO VISUAL SYSTEM AND APPARATUS

ABSTRACT OF THE DISCLOSURE

An audio visual system includes a housing and at least one speaker that is movable so that the speaker can be spaced from the housing to provide the desired acoustics. The system can include a speaker box that is movable from a first state, where the front of the speaker is hidden from view, to a second state, where the speaker or speaker box is spaced from the housing and the front of the speaker or speaker box is unobstructed. The system can include a housing, at least one speaker support comprising an extensible member coupled to the housing, and at least one speaker suspended from the speaker support from which the at least one speaker is suspended.
